The screenshot shows the EMEP data portal interface. At the top, there are logos for emep, ACTRIS, INOS, and NILU. Below the logos are navigation tabs: Home, Acknowledgements, Data policy, and Home, along with a Login button. The main content area is divided into several filter sections: Framework (2), Country (3), Station (21), Mass (4), Instrument type (4), and Component (1). A map of Europe is visible at the bottom left, and a list of additional resources is on the bottom right.

## Measurements of lwe thickness of precipitation amount at Jarczew, Poland (19850101 - 20160101)

This service provides bulk sampler measurements of lwe thickness of precipitation amount observed at Jarczew, Poland (19850101 - 20160101). The observations contain level 2 data. The time resolution is 1d. The observations are stored in the EBAS database (<http://ebas.nilu.no/>).

# EVDC – ESA atmospheric Validation Data Centre

---

# EVDC – ESA atmospheric Validation Data Centre

---

- Serves as a central, long-term repository in Europe for archiving and exchange of correlative data for validation of atmospheric composition products from satellite platforms.
- Builds on the previous ENVISAT Cal/Val database system in operation at NILU since the early 2000s, and provides tools for extraction, conversion and archival of a large amount of data.
- Provides an online information system that supports users in managing and exploiting campaign datasets for Earth Observation missions and applications.
- The objective of the EVDC is to provide an online information system that supports users in managing and exploiting campaign datasets for Earth Observation missions and applications.

<https://evdc.esa.int>

- Search Cal/Val
- Search Satellite
- Overpass Tool

# DCIO – Data Centre Inter Operability

---

- EVDC has set up harvesting methods for sharing metadata between data archives from a number of national and international projects and programmes, e.g. TCCON, TOLNet, AVDC and others, and for the ESA Sentinel-5P Mission Performance Centre. Increasing number of collaborators.
- Work based on The Data Center Inter Operability project that was an initiative started by the European Space Agency (ESA) in December 2008 and further continued in GECA project (Generic Environment for Calibration/Validation Analysis).
- Developed by data centers in close contact with data providers.
- DCIO chose the Open Archives Initiative Protocol for Metadata Harvesting (OAI-PMH) for interchanging catalogue metadata.

# Ozone sonde data

- Data from a number of NDACC and SHADOZ stations are submitted to the EVDC and NADIR data archives on a daily basis and plotted at the data centre. Most of these stations are GAW stations.
- Data mirrored/shared with AVDC and WOUDC.
- EVDC receives o3sondes in Near-Real-Time.
- Service to plot latest o3sonde from selected stations.

# Other plotting services available in EVDC:

E.g. ECMWF data (forecast and analysis),  
o3sondedata (annual plots)

24 h forecast of T on 200 hPa level in the NH valid on 25 November 2016
